(Senior Occupational Therapist, Psychological Medicine,
The Children's Hospital at Westmead)
- Session time:** Monday 11th May, 2009 4.00 – 6.00 pm
- Venue:** Wests Convention Centre
88 Hobart Road, New Lambton NSW 2305
- Register by:** Friday 1st May 2009
- Target audience:** Parents of children with Autism/Asperger's or
Educators currently working with children with
Autism/ Asperger's.
- Cost:** Included in daytime registration
Afternoon tea, handouts and therapy
resources will be provided.

This workshop will be run as a small group to give participants the opportunity to have a hands-on learning experience. Participants will have an opportunity to explore their child's style of sensory processing and to generate practical strategies that can be used to enhance the child's participation in daily life.

This workshop will:

- ✓ Further your understanding of sensory processing theory
Assist you to identify your own style of sensory preferences and strategies that you use to stay calm.
- ✓ Identify how your own child or child you are working with processes sensory information and the impact that has on how they participate in daily life.
- ✓ Provide examples of sensory interventions that assist children with Autism
- ✓ Generate sensory processing interventions to real cases shared by participants or to two clinical case studies.

Places for this workshop will be limited to the first 20 participants who register. Places in the workshop will be confirmed once allocations are made.

Please register your interest for this workshop on the seminar registration form.
